Hearthside
HOME HEALTH

A website and intake system for your agency

Hearthside is a working example: a website families can actually use, and the intake system that takes each referral from first call to start of care. Here's how I'd build the same for your agency.

THE PROBLEM

Where agencies lose patients

Families can't tell what fits

Home health, home care, and hospice blur together, and coverage reads like fine print. People call the agency that made it easiest to understand.

Referrals arrive by fax and voicemail

Discharge planners send a patient and hear nothing back, so next time they send them somewhere that answers.

Intake lives in inboxes

Nobody can see who owns a referral, what's missing, or what's overdue until a patient falls through.

WHAT YOU GET

One system, from first click to first visit

Your website

- Pages for families: services, how care begins, your clinicians, coverage guidance, and FAQ
- Pages for referral partners: a document checklist, a referral form, and a status link they can share
- Your service area, with a ZIP check
- Careers and contact pages with short forms
- Designed for phones first, accessible to WCAG AA, with AAA body text

Your intake system

- A board of every open referral, by stage, with an owner and a time limit for each
- Routing by ZIP code to the right coordinator, with the first-call task created for them
- Missing documents flagged and requested, not chased by email
- Referral records with the next action, documents, and an activity log
- Tasks, partner follow-ups, and reports on speed, sources, and outcomes

Try both: send a sample referral, then watch it arrive in intake.

HOW WE WORK

Four steps, one person accountable

01

Discovery

We map how referrals reach you today, who handles them, and where they stall. You get a written plan and a fixed quote.

ABOUT TWO WEEKS

02

Design

Your brand, photos, and words on the pages, reviewed with you on real devices.

THREE TO FOUR WEEKS

03

Build and launch

The website goes live first. The intake system follows in stages, alongside how your team already works.

FOUR TO EIGHT WEEKS

04

Care

Updates, new pages, accessibility checks, and improvements based on how families and partners use the site.

MONTHLY

INVESTMENT

What it costs

WEBSITE

$8,000–$15,000

One time, depending on the number of pages and how much writing and photography you need.

CARE AND IMPROVEMENTS

$2,000–$3,000 a month

Hosting, updates, content changes, accessibility checks, and ongoing improvements.

INTAKE SYSTEM

Quoted after discovery

It depends on your volume, your team, and the systems it connects to, so it's priced once we've mapped your intake together.

Ranges, not quotes: discovery ends with a fixed price for your agency.

PRIVACY

Patient information, handled properly

The example stores nothing: its referral form can only send a generated sample patient, and everything stays in your browser. A live intake system holds protected health information, so it runs on HIPAA-compliant hosting under a business associate agreement, with sign-in for staff, role-based access, and an audit log. Public pages never collect health details, and the status link partners share shows progress only.

FROM YOU

What I'll need

- An hour with whoever handles intake today, and one with a referral partner if possible
- Your service area, services, and credentials
- Photos of your team, or time for a short shoot
- Who approves copy, so pages don't wait on review

ABOUT ME

Cyril Florita

I'm a product designer and front-end developer. I design and build the whole thing myself, so the person you talk to is the person who makes it. Hearthside is one example; Viteo, a subscription product, is another, and my portfolio has the rest.

Let's look at your intake together.

A 30-minute call: you tell me how referrals reach you today, and I'll show you where this would help. No pitch deck.
